

High temperature **GUILLOTINE DAMPER** for the **HOPING** cement plant, Taiwan.

August 1999

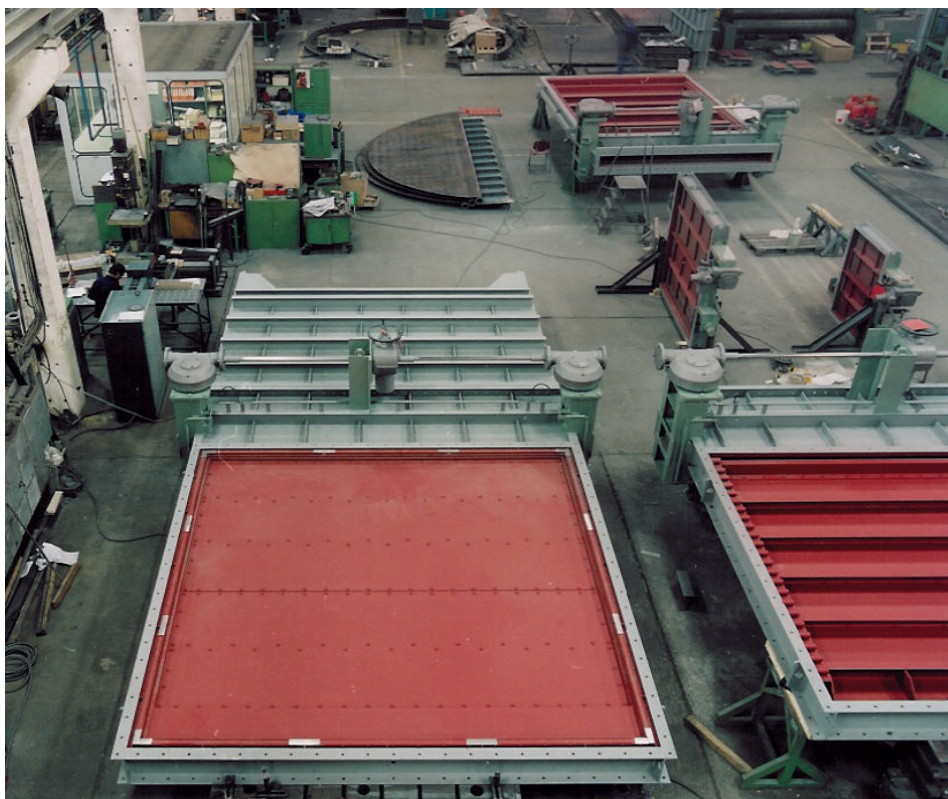

RAUMAG-JANICH Systemtechnik GmbH

RAUMAG - JANICH secured an order from **LOESCHE GmbH**, Düsseldorf, for the supply of all high temperature guillotine dampers required for the **HOPING** cement works in Taiwan, which is one of the world's largest limestone milling plants .

The design of this type of guillotine was based upon an earlier development by Janich Spezialarmaturen, dating back to 1971, which was upgraded in recent years to meet the specific service requirements of such installations.

Equipped with the new **NICROFLEX - HIPERFORM** or **MLO** type sealing system, as well as the new rack and pinion system for heavily dust laden exhaust gas, this guillotine constitutes a reliable and robust shut - off device.

The earlier, basic design has proved itself in approx. 600 installations world wide. Please refer also to our publication "**TECHNOLOGY 5**" in this connection

The picture shows three ,out of a total of six, guillotines supplied in this case, during final assembly and testing at the Rauenstein
